

EXERCISE 31

RANKEYA DATTA

Exercise 31: Which pairs \mathbf{a}, \mathbf{b} can occur in the lemma? In other words: What are all possible Hilbert polynomials of finitely generated graded \mathbf{R} -modules, where $\mathbf{R} = \mathbf{k}[S, T]$?

Solution: The lemma shows that given a finitely generated module M over \mathbf{R} , the Hilbert function $H_M : \mathbb{Z} \rightarrow \mathbb{Z}_{\geq 0}$ is polynomial like, and moreover, $\exists \mathbf{a}, \mathbf{b} \in \mathbb{Z}$ such that $H_M(\mathbf{n}) = \mathbf{a}\mathbf{n} + \mathbf{b}$ for all $\mathbf{n} \gg 0$. Since $H_M(\mathbf{n})$ is nonnegative, the first thing one can say is that $\mathbf{a} \geq 0$.

I will first show that there is a module M such that the Hilbert function of M is given by $\mathbf{a}\mathbf{n} + \mathbf{b}$, for any $\mathbf{a}, \mathbf{b} \in \mathbb{Z}$ such that $\mathbf{a} > 0$.

Well, just let $M = \underbrace{\mathbf{R} \oplus \mathbf{R} \oplus \dots \oplus \mathbf{R}}_{(\mathbf{a}-1)\text{times}} \oplus \mathbf{R}(\mathbf{b} - \mathbf{a})$. Then it is easily seen that the Hilbert polynomial of this module is $\mathbf{a}\mathbf{n} + \mathbf{b}$.

If $\mathbf{a} = 0$, then again by the fact that H_M is nonnegative, it is clear that $\mathbf{b} \geq 0$. We get $\mathbf{b} = 0$ for the zero module. If $\mathbf{b} > 0$, then since $\mathbf{a} = 0$, we get that H_M is constant for $\mathbf{n} \gg 0$. Now, $\mathbf{R}/(T)$ is an \mathbf{R} algebra, hence an \mathbf{R} module, where multiplication by T acts as 0 on this module. So, $\mathbf{R}/(T)$ is actually a module over $\mathbf{k}[S]$, and it is clear that the Hilbert polynomial of this module is just the constant function 1. Hence, $M = \underbrace{\mathbf{R}/(T) \oplus \dots \oplus \mathbf{R}/(T)}_{\mathbf{b}\text{-times}}$

is a module whose Hilbert polynomial is just the constant \mathbf{b} .

In conclusion, (\mathbf{a}, \mathbf{b}) takes values in the set $\{(\mathbf{a}, \mathbf{b}) \mid \mathbf{a}, \mathbf{b} \in \mathbb{Z}, \mathbf{a} > 0\} \cup \{(0, \mathbf{b}) : \mathbf{b} \in \mathbb{Z}_{\geq 0}\}$.
