## Exam 1

Combinatorics, Dave Bayer, October 4, 2011

Name:

Answers

| [1] (5 pts) | [2] (5 pts) | [3] (5 pts) | [4] (5 pts) | [5] (5 pts) | [6] (5 pts) | TOTAL |
|-------------|-------------|-------------|-------------|-------------|-------------|-------|
|             |             |             |             |             |             |       |
|             |             |             |             | 84          |             |       |

Please work only one problem per page, starting with the pages provided. Clearly label your answer. If a problem continues on a new page, clearly state this fact on both the old and the new pages.

[1] How many integers in the sequence

are not divisible by 4, 5, or 6?

$$720 \text{ in all}$$
-  $720/4 = 180 \text{ divisible by 4}$ 
-  $720/5 = 144 \text{ " " 5}$ 
-  $720/6 = 120 \text{ " " 6}$ 
+  $720/20 = 36 \text{ 4 and 5}$ 
+  $720/30 = 24 \text{ 5 and 6}$ 
+  $720/12 = 60 \text{ 4 and 6 (1cm 12)}$ 
-  $720/60 = 12 \text{ 4,5,and 6 (1cm 60)}$ 

$$720 - (180 + 144 + 120) + (36 + 24 + 69) - 12$$
 $444$ 
 $720 - 336 = 384$ 

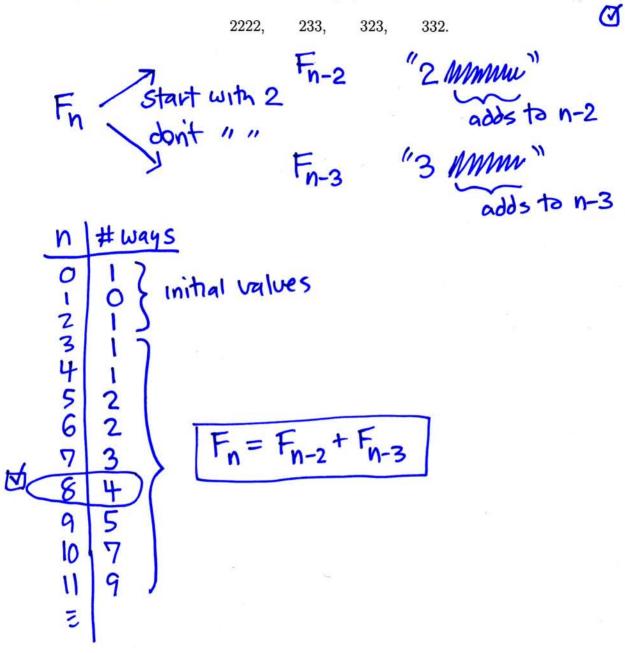

[2] Count the number of ways of making change for n cents using pennies and nickels. Give a table of small values, and a generating function. For example, there are two ways of making change for 8 cents, namely

$$1+1+1+1+1+1+1+1+1$$
,  $1+1+1+5$ .

| n # ways          | Let a be a penny<br>b " nickel            |
|-------------------|---|
| 123456789         | (1+a+a2+)(1+b+b2+)                        |
| 5 2<br>6 2<br>7 2 | = 1-a 1-6                                 |
| 8 2 2 2 3         | setting a=t, b=t,                         |
| 11 3 =            | $G = \frac{1}{1-t} \cdot \frac{1}{1-t^s}$ |

(For example,  $a^8$  and  $a^3b$  are the two ways to make change for 8 cents.)

[3] Count the number of words using the letters 2 and 3 whose letters add up to n. Give a table of small values, and a recurrence relation. For example, there are four words that add up to 8, namely

$$F_n = F_{n-1} + F_{n-2}$$
 only valid for  $n \ge 2$ 

with initial values  $F_0 = 0$  and  $F_1 = 1$ . Solve for the generating function

$$G = \sum_{n=0}^{\infty} F_{n} t^{n}$$

$$G = \sum_{n=0}^{\infty} F_{n} t^{n}$$

$$G = \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n-2} t^{n}$$

$$G = \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n}$$

$$G = \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n}$$

$$G = \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n}$$

$$G = \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n}$$

$$G = \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n}$$

$$G = \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n}$$

$$G = \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n}$$

$$G = \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n}$$

$$G = \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n}$$

$$G = \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n}$$

$$G = \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n}$$

$$G = \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n}$$

$$G = \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n}$$

$$G = \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n}$$

$$G = \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n}$$

$$G = \sum_{n=2}^{\infty} F_{n} t^{n} + \sum_{n=2}^{\infty} F_{n} t^{n} +$$

[5] Count the number of ways of making change for n cents using 5, 6, and 7 cent coins. Give your answer as a generating function. Of these, how many ways do not contain a way to make change for twelve cents? For example,

$$5+5+5+5+5+5$$
,  $6+6+6+6+6$ 

are two of the possible ways to make change for 30 cents, but one of them contains a way to make change for 12 cents.

$$a = 6 \text{ cents}$$
  $\Rightarrow t^{2}$   
 $b = 6 \text{ cents}$   $\Rightarrow t^{2}$   
 $c = 7 \text{ cents}$   $\Rightarrow t^{2}$   
all ways,  $(1-a)(1-b)(1-c)$   $\Rightarrow (1-t^{6})(1-t^{6})(1-t^{7})$ 

There are two ways to make change for 12 cents, acc and  $6^2$ , If we subtract both of them, we have to add back in ab2c:

$$\frac{1-ac-b^2+ab^2c}{(1-a)(1-b)(1-c)} = \frac{(1-ac)(1-b^2)}{(1-a)(1-b)(1-c)}$$

$$\Rightarrow \frac{1-2t^{12}+t^{24}}{(1-t^5)(1-t^6)(1-t^7)} = \frac{(1-t^{12})^2}{(1-t^5)(1-t^6)(1-t^7)}$$

Another way:

• use b at most once

• use a or c but not both

(1+b) 
$$\left[\frac{1}{1-a} + \frac{1}{1-c} - 1\right]$$
 gives same answer

[6] Approximately what fraction of all permutations of n letters have no fixed points? One fixed point? Two fixed points? If you keep going for k fixed points for each k, do your answers add up to one?

12 1/e have no fixed points

(1)  $F_{n-1/n!}$  have one fixed point, where  $F_n = \#$  devangements of n letters  $F_{n/n!} \approx 1/e$ 

So (n) Fn-1/n! = Fn-1/(n-1)! ~ 1/e also have one fixed point.

(1) Fn-2/h! = = = Fn-2/(n-2)! ~ /2e have two fixed points.

1/e+1/e+1/2e+1/6e+ ...

= 1/4 (1+1+1/2+1/6+ ...)

= 1/e.e = 1 d

Yes, the answers add up to one.
